- A. Panamanians try hard to save the golden frog.
- B. The female golden frogs are smaller than males ones.
- C. The golden frog uses its ears to detect sound.
- D. Humans are the main reason for the frog's extinction.

Questions 6 to 10 are based on the following passage:

Food preservation is usually done with the help of chemicals. Some people, however, prefer naturally preserved foods. Fortunately, there are a number of traditional methods to try. The simplest method is to dry food. In around 12,000 B.C., civilizations used the sun and the wind to do this. Nowadays, fans and heaters are used to turn grapes into raisins and fresh tomatoes into sun-dried ones. Then, there is curing. This is similar to drying, but instead of heat and air, salt is used to remove liquid from the food. Curing is actually the process that gives us ham and bacon from pork. It's also why they taste saltier than normal pork.

Another method is canning. This French invention came about when Napoleon offered money to anyone who could preserve food for his army. Food is first boiled in jars or cans. The heat kills the bacteria in the food, and as it cools, a vacuum seal around the lid is created. Finally, there is fermentation. Here, bacteria are added to food. This turns milk into cheese and yogurt, cucumbers into pickles, and cabbage into Kimchi. Practice these different techniques to make your own delicious, chemical-free food. There's nothing like tasting the fruits of your own labor!

6. What is the best title of the passage?

- A. How to make Kimchi
- B. How to make organic food
- C. Ways to preserve food naturally
- D. Ways to taste fruits

7. Which methods of preservation remove water from food?
 - A. Drying and curing
 - B. Curing and canning
 - C. Canning and fermentation
 - D. Fermentation and drying
8. Which of the following statement is not true about canning?
 - A. It kills bacteria by boiling the food.
 - B. It was invented by a French person.
 - C. It was a method used to preserve army food.
 - D. It was first used to make ham.
9. Which of the following is preserved through fermentation?
 - A. Canned tuna
 - B. Cheese
 - C. Bacon
 - D. Raisins
10. What can we learn from this passage?
 - A. The science behind preserving food is new.
 - B. Preserving food is dangerous if done incorrectly.
 - C. It is not healthy to keep food for a long time.
 - D. Not all food preservation requires chemicals.

IV. Writing Ability: 20%

Use the word(s) provided as the beginning to complete the following sentences:
