15. The term “**digital natives**” means _____ young people _____ was born during or after the general introduction of digital technology, and through interacting with digital technology from an early age.

(A) the...which (B) these...that (C) those...who (D) there are...who

II. Reading Comprehension: 30% (2% each)

Directions: Read the two passages and answer the questions based on the texts.

A. Reading 1: Dress to Impress

You may have heard people say, “You are what you wear!” While it may seem a superficial way to describe someone’s personality, judgment based on attire is common practice. People you meet for the first time may form an opinion about you simply from your appearance, even before you introduce yourself. Once formed, that opinion may be very difficult to change. Because of that, many men and women are very conscious of how they dress, especially when they are at work. More importantly, people tend to be aware of the way they look when they are searching for a job.

When preparing to meet prospective employers, men and women alike must consider the impression they want to make when walking in the door. Usually the dress code for men is a simple dark blue or gray two-piece suit. When it is made of wool or other natural fibers, a suit fits better than one made of synthetic material, like polyester. Usually, the nicer the clothing material, the better it fits the person wearing it. Besides a suit, men must wear a white cotton undershirt and a white, long-sleeved, button-down shirt. A nice silk tie, with colors that match the suit, along with a pair of black, well-polished, leather shoes, complete the image of success.

For people who do not own a suit, there are simpler yet elegant ways to dress. Men can wear a clean sports coat, preferably of a dark color. Together with dark slacks and a white shirt, it will still create the professional look necessary when interviewing. Black shoes and a matching belt will further help achieve a conservative business appearance.

1. Paragraph A is mainly about:
 - A. applying for a job.
 - B. learning how to dress.
 - C. the importance of clothing on first impressions.
 - D. how to change a bad first impression.
2. Paragraph B is mainly about:
 - A. having a professional look.
 - B. the best fabrics for business clothing.
 - C. clothes that are easy to wear.
 - D. the type of undershirt men should wear.
3. Paragraph C is mainly about:
 - A. wearing clothes that do not match.
 - B. wearing shoes of the same color.
 - C. making sure clothes are clean.
 - D. alternatives to wearing a suit.
4. According to paragraph C, men who do not own a suit:
 - A. should still dress conservatively.
 - B. may find it difficult to get a job.
 - C. should not interview for jobs.
 - D. must wear a cotton undershirt.
5. According to paragraph A, first impressions may be:
 - A. judgmental.
 - B. permanent.
 - C. unimportant.
 - D. avoidable.

B. Reading 2: Food Safety

In the modern world, we do not usually spend much time thinking about the safety of the food we eat. We have refrigerators, good quality cooking equipment, and supermarkets and food companies that we trust. There is a global network of food transportation that moves the food we eat quickly and efficiently around the world. We think we are safe. The safety of the food we eat may have been an issue for our ancestors; refrigeration has only been around since the past century, and in times before that, people found other ways of preserving food, such as salting or smoking the food. But for the present day population, food safety is not an issue, right? Wrong.

學系	英文學系	考試時間	70 分鐘
科目	英文文法、閱讀與寫作	本科總分	100 分

Every year, millions of people around the world become ill because of eating unsafe food. Many of these people die. There are more than 200 diseases known to be spread through unsafe food and water. The number of people infected by these diseases increases each year due to global networks of food production and delivery. It is estimated that 75% of all new infectious human diseases originally come from animals. Many of these diseases are spread to humans through the way the animals are treated in the food production chain.

It is easy to find statistics supporting the existence of this direct link between food production and food safety. Studies have shown, for example, that when the rate of salmonella, a dangerous bacteria often found in chickens, is reduced by 50%, the rate of people becoming ill from this bacteria is also reduced by 50%.

With this in mind, many organizations and individuals are asking what can be done to improve food safety. Some people say that there should be much stronger government controls on health and safety to protect people from these diseases. Farmers and supermarkets, for example, should face heavy penalties if they cause outbreaks of disease. They produce the food; it is their responsibility to keep us safe.

Others argue, however, that we all need to take responsibility for this issue. Yes, farmers, producers, and supermarkets need to take serious measures to protect the customer, but the people who consume the food also need to be educated in issues of food safety. Simple steps such as keeping food areas clean and separating cooked and uncooked foods can help reduce the risk of disease. Information, education, and cooperation are what is really needed for people to eat safely.

B1: Match paragraphs 1 to 5 with the purposes A to E.

Paragraph	Purpose
1	A Report data
2	B Present another side of an issue
3	C Introduce the topic
4	D Present an argument
5	E Give supporting information

B2: Decide if the statements are *true* (T), *false* (F), or *not given* (NG).

- In the past, people could not do anything to make food last longer safely.
- Millions of animals die each year from eating unsafe food.
- Animals are responsible for all new infectious human diseases.
- If you cut the rate of salmonella in chickens, you also cut the rate of the disease in humans.
- The writer gives the advice to keep different kinds of food separately.
